

ASHUTOSH MISHRA

Full-Stack Developer | Application Developer

mishrashu777@gmail.com | [linkedin](#) | [github](#)

SUMMARY

B.Tech Computer Science student graduating in 2028 with hands-on experience building full-stack web and Android applications. Experienced with Python, C++, JavaScript, React, Node.js, Firebase, Kotlin, Jetpack Compose, and TensorFlow Lite, with projects spanning real-time communication, offline-first mobile systems, AI-assisted tooling, and cloud-backed applications.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, Kotlin

Web: HTML, CSS, React.js, Next.js, Node.js, Express.js, Tailwind CSS, REST APIs

Android: Jetpack Compose, Android Studio, Gradle

Cloud & Data: Firebase Authentication, Cloud Firestore, SQLite, DataStore

AI/ML: Pandas, NumPy

Tools: Git, GitHub, VS Code, Jupyter Notebook

EXPERIENCE

Python Development Intern — Cognifyz Technologies | Dec 2025 – Jan 2026 | [github.com/ashu-mishra06/python_projects_cognifyz](#)

- Completed structured Python development tasks across two project levels, implementing programs for programming logic, data structures, and problem solving.
- Applied modular programming, debugging, and clean-code practices while developing and testing Python solutions.
- Used Git for version control and organized completed internship work into a documented repository.
- Collaborated with mentors to review implementations and improve code quality and development practices.

PROJECTS

RoadSOS — Offline Crash Emergency Assistant | [github.com/ashu-mishra06/RoadSOS](#)

Kotlin | Jetpack Compose | TensorFlow Lite | SQLite | Android

- Built an Android emergency-response prototype that detects crash-like audio events and transitions through Detect → Countdown → Alert → Locate → Assist → Record workflow.
- Implemented on-device audio monitoring with a TensorFlow Lite helper, false-alarm cancellation, emergency SMS/call actions, and current/last-known location fallback.
- Designed a ViewModel-based MVVM-style architecture with Jetpack Compose, DataStore, SQLite offline service lookup, foreground services, and local emergency history.
- Added offline nearby-service discovery for hospitals, police stations, vehicle repair, and roadside assistance; prototype includes a 1.1 MB TFLite model and 7.46 MB local database.

Couple Connect — Real-Time Private Communication Platform | [github.com/ashu-mishra06/Couple-connect](#)

React | Vite | Firebase Authentication | Cloud Firestore | Firebase Hosting

- Built a private communication platform with email/password authentication, Couple ID creation/joining, shared couple access, and profile management.
- Implemented real-time messaging and photo-sharing functionality using Cloud Firestore, including a real-time snap feed and partner status.
- Added consent-based location sharing, latest-location mapping, and location history while keeping location sharing opt-in.
- Configured Firebase deployment and Firestore rules for a cloud-backed application workflow.

ChatGraph — Visual Conversation Navigation Platform

React | Next.js | Browser Extension | Graph Visualization | AI/Search

- Developing a visual navigation platform that represents long ChatGPT conversations as connected nodes for faster context discovery.
- Designing a browser-extension workflow to extract conversation data locally without requiring users to provide ChatGPT credentials.
- Structuring the system into browser-extension, frontend, backend, and AI/search components for modular development.
- Focusing on privacy-conscious data handling, searchable conversation context, and graph-based navigation.

EDUCATION

Bachelor of Technology — Computer Science Engineering | LNCT Group of Colleges | 2024–2028 | Expected Graduation: May/June 2028

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

CERTIFICATIONS

Oracle Certified Foundations Associate | Python Certification | Data Structures Bootcamp | The AI Advantage
